Art Unit: 2633

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-2, 5, 9-12, 16 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 3 and 7 of copending Application No. 09/995108 in view of Bregman (5093879).

09/995108 claims a plurality of transceiver channels including photo detectors having a predefined width (claim 7), a plurality of test pads (claim 1, line 4) and a plurality of power pads (claim 1, lines 7-11). Although he does not specifically claim details of the channel spacing, Bregman et al teach that it is well known for such spacing to be 250 micrometers (column 14, lines 1-4). It would have been obvious to have equal channel spacing, which would be compatible with standard fiber cable in order to provide easy alignment with the fiber cable. In regard to claim 2 of the present application, see claim 3 of 09/995108. In regard to claims 16 and 10, it is well known in integrated circuits that all spacing should be minimized in order to provide the smallest circuit that can be integrated, therefore, it would have been obvious to minimize the spacing between test pads in order to reduce size of the circuit.

This is a provisional obviousness-type double patenting rejection.

3. Claims 3-4, 6-8, 13-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
4. Claims 17-19 are allowed.
5. Applicant's arguments filed 7-7-05 have been fully considered but they are not persuasive. The applicant argues that the two applications are not commonly owned. When there is a common inventor, double patenting is proper. Further, the fact that the other application has an additional element does not make the claims patentably distinct. The question is whether the claims of the present application are obvious based on the claims of 09/995108.
6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
